

HOPE PEPEROMIA

Grow your reptile, amphibian, or invertebrate jungle with ReptiFauna™ tropical plants.

These plants are perfect for naturally enhancing your animal habitat and are easy to care for.

Origin: Central and South America

Care Level: Intermediate

Light: Full Light

Humidity: Moderate 30-70%

Environment: Tropical

Placement: Midground

Water Frequency: Weekly

Growth Rate: Slow

TIPS:

- Water only when the top two inches of substrate is dry
- Hope Peperomia's preferred temperature range is 60-80 degrees. If the habitat is too hot, the plant will begin to wilt
- Misting with warm, distilled water every few days will help these plants thrive

TO GET STARTED:

- Prepare the substrate by digging a small two inch hole to accommodate the plant
- Remove the plant from the pot being careful to not damage the roots
- Gently remove as much substrate from the plant and discard the substrate in the trash
- Lightly rinse the plant under de-chlorinated room temperature, or distilled water
- Place the plant in the hole in the substrate
- Fill in the open areas in the hole with substrate until it covers just up to the base of the plant
- Gently smooth out the substrate
- Water according to care directions above, always using room temperature water
