

ReptiFauna™

# MARANTA

Grow your reptile, amphibian, or invertebrate jungle with ReptiFauna™ tropical plants.

These plants are perfect for naturally enhancing your animal habitat and are easy to care for.

**Origin:** South America

**Care Level:** Beginner

**Light:** Partially Shaded

**Humidity:** Humid 70-100%

**Environment:** Tropical

**Placement:** Midground

**Water Frequency:** Weekly

**Growth Rate:** Moderate - Fast

**HUMIDITY:**

0%  100%

## TIPS:

- Place this plant in areas of the habitat where it will receive less intense light as exposure to bright light can cause the leaves to fade in color
- Maranta thrives best in warm, humid habitats
- Allow the surrounding substrate to almost completely dry out in between watering

## TO GET STARTED:

- Prepare the substrate by digging a small two inch hole to accommodate the plant
- Remove the plant from the pot being careful to not damage the roots
- Gently remove as much substrate from the plant and discard the substrate in the trash
- Lightly rinse the plant under de-chlorinated room temperature, or distilled water
- Place the plant in the hole in the substrate
- Fill in the open areas in the hole with substrate until it covers just up to the base of the plant
- Gently smooth out the substrate
- Water according to care directions above, always using room temperature water
