

# VENUS FLY TRAP

Grow your reptile, amphibian, or invertebrate jungle with ReptiFauna™ tropical plants.

These plants are perfect for naturally enhancing your animal habitat and are easy to care for.

**Origin:** North America

**Care Level:** Intermediate

**Light:** Full Light

**Humidity:** Humid 70-100%

**Environment:** Tropical

**Placement:** Midground

**Water Frequency:** Keep moist

**Growth Rate:** Slow

**HUMIDITY:**

## TIPS:

- Venus fly traps are sensitive to high amounts of minerals found in tap water. If you live in an area with hard water, be sure to always use distilled water
- These plants thrive in substrate that is always moist, but not waterlogged
- Venus Fly Traps will thrive in warm, bright habitats

## TO GET STARTED:

- Prepare the substrate by digging a small two inch hole to accommodate the plant
- Remove the plant from the pot being careful to not damage the roots
- Gently remove as much substrate from the plant and discard the substrate in the trash
- Lightly rinse the plant under de-chlorinated room temperature, or distilled water
- Place the plant in the hole in the substrate
- Fill in the open areas in the hole with substrate until it covers just up to the base of the plant
- Gently smooth out the substrate
- Water according to care directions above, always using room temperature water
